

HEDAMO Diagnostic — Evidence Brief

Journey: Homepage → Producers → Engage → Signup | Verified live, Aug 4, 2026 | Thanmayee Dindugala, AFAP Part A

User & Job-to-be-Done

A first-time producer arriving at **hedamo.com** needs to decide, in under a minute, whether they can start declaring their own product today — and if so, where to click.

Walking the Flow as a Real Producer

Click "Producers" → read the three steps ("Declare what you know...") → look for a button to act → only option is "*See the structure applied* →," a read-only sample, not a start. Backtrack, notice "Engage" in the header → fill a generic five-option form with no memory of the referring page → submit and wait → separately discover **/signup** needs an invitation token nobody explained. One root cause: the site never states its own real process.

Issue 1 — No CTA at the moment of highest intent

Right after the 01/02/03 steps — the point where a producer is most ready to act — the page offers only a sample-profile link, not a way to start. "Engage" exists sitewide, but isn't connected to this moment; the producer has to notice it, then guess it's the real starting point.

Fig. 1 — /who-it-serves/producers: no CTA follows the three steps that build intent.

Issue 2 — The one real entry point has no memory of who's arriving

The Engage form treats every visitor as a stranger — a government body and a smallholder producer see the identical blank form. No pre-filled route, no context carried from the page that sent them, just five options to self-sort through and an open message box to fill from scratch.

Fig. 2 — /engage: generic form, no context from referring page. Name/email redacted.

Issue 3 — Signup is gated by an unexplained invitation token

A producer who reaches **/signup** hits a hard stop: "*Registration is invitation-only. Enter your invitation token below, or ask an administrator for one.*" Nothing on the homepage, Producers page, or Engage form explains what this token is, how to request one, or whether submitting Engage even leads to one. The producer has done everything asked of them and still cannot act.

Fig. 3 — /signup: invitation token required, unexplained anywhere upstream. Name/email redacted.

Priority Recommendation

Fix Issue 3 first — not Issue 1. Issues 1 and 2 slow a producer down; Issue 3 stops them completely, even for the small number who persist through the friction of 1 and 2. A faster, better-routed path into a wall that still doesn't open is a worse experience than a slower path that eventually explains itself. Fixing the explanation gap at the point of total blockage protects everyone who reaches that point — including future producers once Issues 1 and 2 are also improved and more people arrive there.

Proposed Change

Add one explanatory line directly above the token field on **/signup**: "**Don't have a token? Request one via Engage — most producers hear back within [X days].**" This single sentence converts an unexplained dead end into a visible, credible next step, and sets a time expectation instead of leaving the producer to wonder if anyone is coming back to them at all.

Two Success Metrics

- 1. Signup-to-Engage bounce recovery.** Baseline: current rate of visitors who reach /signup and leave without any further action (30-day rolling). Target: 20% relative reduction in dead-end exits once the explanatory line and Engage link are added.
- 2. Token-request volume via Engage.** Baseline: current Engage submissions tagged "Producer disclosure readiness" (currently the only visibility into producer-side demand). Target: measurable increase in this route's submissions within one month, confirming producers now understand Engage as the way through the gate, not a dead end.
